

Industrial IT – Industrial lighting – Traffic solutions

ABOUT CATENA

Catena a.s was founded 2005 by Odd Wiik and Inge Saltvoll with import and distribution of **Industrial Communication** products as our business model. Today this is a broad range of products for communication in **harsh environment** from manufacturers like Acksys, Etic Telecom, Ethernet Direct, Extek, Lancom, Tempo and Telegärtner. We are also providing required **knowledge** regarding configuration and installation of our products.

Part of this was **emergency communication** systems for road **tunnels** and it was decided very early to expand the range with **weatherproof cabinets**, developed by Catena and manufactured in Norway. Today this is part of **Traffic Solutions** which is a separate section in the company with a broad range of products including telephone and data systems, cabinets, kiosks and LED signs.

The newest section of Catena is **Industrial Lighting** based on **LED** technology. Typical users are industry, municipality and road authority. Several test sites are installed and delivery to municipalities started in 2009.

Catena's **primary market** is Scandinavia with **Norway** as our base and our typical customers are municipalities, contractors, government, defence and system integrators. Our products are also available through nationwide distributors of data, telecom and electrical equipment.
